PAKISTAN’S NUCLEAR EXPORTS: WAS THERE A STATE STRATEGY?

Paper prepared for the Nonproliferation Policy Education Center

Bruno Tertrais

20 July 2006

How the Network Operated

Most Pakistani nuclear-related exports began about a decade after their imports network was set up. The Pakistanis thus had acquired a very significant experience in dealing with nuclear transfers, legal and illegal. Contacts and procedures used for Pakistani imports were sometimes of direct use to exports when they involved transfers from Western firms, intermediaries and shell companies.

The network exported two different things: know-how on uranium enrichment and weapons design, and centrifugation technology. Its clients were North Korea, Iran, Iraq, Libya, and maybe others. Once fully matured, it comprised several main “nodes”: the UAE (the “company’s headquarters”), Malaysia, Turkey, and South Africa – not including various personal properties around the world. There were half a dozen “workshops” around the globe, with Dubai serving as the main platform for re-exporting. AQ Khan set up dozens of shell companies to that effect, sometimes just for one-time use.

A total of about 50 people were actively involved in the network. But AQ Khan operated with a dozen of key close associates. It was a “family business”. Those included:

- **Buhary Syed Abu Tahir**, a Sri Lankan national. He was, so to say, the “chief operating officer” of the exports network. His involvement started in the second part of the 1980s. His “headquarters” were the Dubai-based firm SMB Computers.
- **Peter Griffin** (a British national) and **Mohammed Farooq** (a Pakistani official), who were both involved also in the imports network. Griffin designed the Libyan “Machine Shop 1001”, and imported machines from Spain and other European

---

1 There were a number of Pakistan-born and Iran-born official and advisers in the entourage of MM. Mandela et Mbeki, sometimes referred to as the “Karachi connection”. AQ Khan’s wife was a South African national.

2 Sudan was also a major platform of the network, at least in the years 1999-2001, in particular for materials destined to Iran. Ian Traynor & Ian Cobain, “Clandestine Nuclear Deals Traced to Sudan”, The Guardian, 5 January 2006.

countries for that project. Farooq was a KRL official in charge of procurement and sales abroad.\textsuperscript{6}

- **Paul Griffin** (son of Peter Griffin), who operated Gulf Technical Industries, one of the main Dubai-based front companies.\textsuperscript{7}

- **Urs Tinner**, a Swiss national and long-time associate of AQ Khan, as well as his father Friedrich and his brother Marco, who were involved in both the Iran and Libya enterprises.\textsuperscript{8}

- **Gotthard Lerch**, another long-time associate, a German national who has been described as the “division manager for the Libya business” and Tahir’s “main contractor”. He was in particular in charge of the South African “node”.\textsuperscript{9} He involved Gerhard Wisser (a German mechanical engineer) in the Libya operation, who in turn involved Daniel Geiges (a Swiss mechanical engineer) and Johan Meyer (a South African engineer).\textsuperscript{10}

The main companies reportedly involved in centrifuges exports were Khan Research Laboratories (Pakistan): ring magnets, aluminium and maraging steel, flow-forming and balancing equipment, vacuum pumps, non-corrosive pipes and valves, end-caps and baffles, power supply; Scomi Precision Engineering (Malaysia): aluminium and maraging steel, end-caps and baffles; SMB Computers (UAE): non-corrosive pipes and valves, end-caps and baffles, power supply; ETI Elektroteknik (Turkey): aluminium and maraging steel, power supply; and Trade Fin (South Africa): flow-forming and balancing equipment, vacuum pumps, non-corrosive pipes and valves.\textsuperscript{11} Other companies involved included Bikar Mettale Asia (Singapore), Hanbando Balance Inc. (South Korea), Krisch Engineering (South Africa), CETEC (Switzerland), Traco (Switzerland), and EKA (Turkey).\textsuperscript{12} Equipments for Libya were imported by the Tinner family from Spain (vacuum pumps, flow-forming machines), Italy (special furnaces), France, the United Kingdom and Taiwan (machine-tools), as well as Japan (a 3-D measuring tool).\textsuperscript{13}

\textsuperscript{5} Polis Dijara Malaysia, op. cit.

\textsuperscript{7} Some sources also claim the involvement of Noman Shah, former son-in-law of AQ Khan.

\textsuperscript{8} Urs Tinner oversaw the production of centrifuges parts in Malaysia as a “consultant” until 2003. Friedrich Tinner, president of the Swiss firm CETEC, bought components from Europe. Marco Tinner, president of the Swiss firm Traco, played the same role.

\textsuperscript{9} Details on the South Africa operation are contained in High Court of Transvaal, The State vs. 1. Daniel Geiges 2. Gerhard Wisser (undated document, 2006).

\textsuperscript{12} Ibid.

As will be seen, however, there is evidence that high-level political and military leaders were also involved in nuclear exports. This despite the written assurances given twice to the United States (first by Zia ul-Haq in November 1984, then in October 1990 by president Ghulam Ishaq Khan) and countless official statements testifying to the immaculate state of Pakistan’s proliferation record.

Thus the network was not a “Wal-Mart”, as IAEA Director General Mohammed El-Baradei wrongly characterized it. Rather, it was an “Import-Export Enterprise”. From the initial import-oriented network under the direction of MA Khan, a separate, export-oriented branch developed under the direction of AQ Khan, starting in the mid-1980s. In the late 1990s, it became more decentralized and “privatized” as AQ Khan realized he was under surveillance.

The story cannot be reduced to the simple “reversal of the flow” described by some. However, there were clear links between the imports and exports networks. Some of the components that AQ Khan exported were also components he needed for the national program; thus, starting in the mid-1980s, he reportedly began to order more components than necessary for the national program. Also, several key individuals involved in Pakistani exports were also involved in the imports. Mohammed Farooq, AQ Khan’s principal deputy, was reportedly in charge of overseas procurement for KRL. Others were long-time associates, who he had met in the 1960s and 1970s. They included Peter Griffin (who was involved in early imports of inverters from the UK); Gotthard Lerch (who used to work at Leybold Heraeus, which was to become a key contractor of Pakistan); Otto Heilingbrunner (same); Henk Slebos (who studied with AQ Khan, used to work at Explosive Metal Works Holland and sold various equipment to Pakistan over the years, including bottom bearings in 2001 which were probably meant for Iran or Libya); Friedrich Tinner (who used to work at Vacuum Apparate Technik, a firm who sold equipment to Pakistan in the 1970s); and Heinz Mebus (who was involved in the first centrifuge transfers to Iran in the mid-1980s). Finally, Dubai was a platform for Pakistani imports too. And the BCCI was, it seems, one of the conduits used (until its demise in 1991) for payments made to Pakistani officials.

-Iran-

The issue of transfers to Iran is complex. To this day, it remains difficult to tell the exact degree of implication of the various Pakistani centres of power in decisions related to the sharing of nuclear technologies with Tehran. One individual played a central role: Mirza Polis Dijara Malaysia, op. cit.; “Nuke trail traced to M’sia, Pakistan, Libya”, The Korea Herald, 16 February 2006.

15 See Lancaster & Khan, “Pakistanis Say…”, op. cit.

Aslam Beg, deputy CoAS (1987-1988), then CoAS from August 1988 until August 1991.\(^{17}\) There seem to have been three different phases.

**Phase 1: 1987-1988**

First, there was a period of limited cooperation probably approved by general Zia-ul-Haq himself.

This cooperation seems to have begun in 1987. AQ Khan may have visited Iran in January of that year.\(^{18}\) A secret bilateral agreement was reportedly signed between the two countries, including provisions for training of Iranian scientists.\(^{19}\) A negotiation took place in Dubai of the selling of P1 centrifuge diagrams, an enrichment plant diagram, and spare parts for at least one P1 machine (but probably many more, since the offer involved 2,000 machines).\(^{20}\)

President Zia had, it seems, authorized the initiation of a bilateral nuclear cooperation while asking for it to remain limited.\(^{21}\) He was wary of AQ Khan whom he saw as “politically naïve and a publicity seeker”; he was reportedly upset when Khan upstaged him in the famous 1987 interview that revealed to the world that Pakistan had the Bomb.\(^{22}\)

For his part, Khan was reportedly telling military authorities that the transfers were of very limited importance, since they concerned only used and or obsolete equipments.\(^{23}\)

---

\(^{17}\) A US scholar says that MA Khan personally confirmed this (interview with US scholar, Washington, October 2005).

\(^{18}\) Yossef Bodansky, Pakistan’s Islamic Bomb, Freeman Center for Strategic Studies, July 1998; Rajesh Kumar Mishra, Pakistan as a Proliferator State: Blame it on Dr. A. Q. Khan, Paper n° 567, South Asia Analysis Group, 20 December 2002.

\(^{20}\) The IAEA was shown in January 2005 a copy of a document reflecting “an offer said to have been made to Iran in 1987 by a foreign intermediary”, involving the supply of “a disassembled machine (including drawings, descriptions and specifications for the production of centrifuges); drawings, specifications and calculations for ‘a complete plant’; and materials for 2000 centrifuges machines”. IAEA, Implementation of the NPT Safeguards Agreement in the Islamic Republic of Iran, GOV/2006/15, 27 February 2006, p. 3. An Iranian opponent from the NCRI stated in a press conference in Vienna in November 2004 that Pakistan provided to Iran, in 2001, a small quantity of HEU. However, this statement was made in answer to a question and was not subsequently used in NCRI propaganda documents. See Press Conference By Mohammad Mohadessin, Foreign Affairs Committee Chairman, National Council of Resistance of Iran, 17 November 2004 ; et Elaine Sciolino, « Exiles Add to Claims on Iran Nuclear Arms », New York Times, 18 November 2004.

\(^{21}\) Lancaster & Khan, “Pakistani Say…”, op. cit. ; and John Wilson, « Iran, Pakistan and nukes », Observer Research Foundation, 2005.

\(^{22}\) Kux, op. cit., p. 284.

General Beg, in his capacity of Army VCoS, may have played a role. He reports that emissaries from Iran first approached Pakistan near the end of the Iran-Iraq war, with broad requests of military sales, which were according to him denied by President Zia. This is consistent with what a former Pakistani ambassador to Iran reported, namely that Zia refused to abide by an Iranian request for mastery of the fuel cycle, made in Tehran in January 1988.24

Phase 2: 1988-1991

After Zia’s death, the two parties may have envisioned a more complete cooperation, under pressure from general MA Beg, but probably with the knowledge of political authorities.

It is possible that AQ Khan took a personal initiative, and then was encouraged to continue by general Beg and President Khan when they abruptly came to power after Zia’s death in August 1988. According to a Pakistani account, AQ Khan’s first move when Benazir Bhutto came to power (December 1988) was to ask her to make him PAEC director; when she refused, he chose to place his loyalty with MA Beg and GI Khan.25

General Beg came back from a February 1990 visit to Iran with assurances from Tehran about support for Pakistan about Kashmir.26 He has mentioned an Iranian request for the Bomb made in Islamabad that same year.27 He has consistently denied having approved such transfers, but has confirmed the scope of nuclear discussions between Tehran and Islamabad at the time, at Tehran’s initiative. According to him, the contacts had been made at Iran’s initiative; he and Benazir Bhutto (who remained Prime minister until August 1990) were playing “ping-pong” with their interlocutors, constantly telling them to go and see the other party.28 A former US administration official, Henry Rowen, says that Beg threatened in January 1990 to transfer military usage nuclear technology should Washington stopped arms sales to Pakistan.29

There is evidence that Benazir Bhutto’s government knew about this cooperation. She was reportedly told in 1989 by Hashemi Rafsandjani that the Pakistani military had offered nuclear technology to Iran.30 AQ Khan has reportedly said that the transfers were encouraged by the military adviser to Mrs. Bhutto, general Imtiaz Ali (and explicitly

27 Gannon, « Iran sought advice in Pakistan on attack », op. cit.
30 Frantz, “Pakistan’s Role...”, op. cit.
authorized by Beg).\textsuperscript{31} One meeting in Karachi between AQ Khan and the Iranians took place at the request of another Bhutto adviser.\textsuperscript{32} According to Beg, Mrs. Bhutto told him that the Iranians had offered four billion dollars for nuclear technology.\textsuperscript{33} Mrs. Bhutto herself says that by 1989 she had made her way into the inner circle of nuclear decision-making.\textsuperscript{34} She had been extensively briefed on her own country’s program by the US Administration during her June 1989 visit to Washington.\textsuperscript{35} (Former US ambassador Dennis Kux confirms that she was probably “in the loop” until early 1990.\textsuperscript{36})

However, her knowledge of nuclear transfers may also have been a factor in her dismissal. She was pressed hard by the United States about Pakistan’s nuclear program. In the summer of 1990, she became seen as a problem, and AQ Khan reportedly asked Beg for her sacking.\textsuperscript{37}

\textit{Phase three: 1991-1995}

In a third phase, the two countries seem to have begun a closer cooperation, in line with a growing convergence of interests.

Two events changed Pakistani perspective. One was the invasion of Kuwait. The other was the imposition of US sanctions under the Pressler amendment, which became inevitable on October 1, as US President George Bush refused to certify that Pakistan did not have a military program, may have played a role.

An Iranian-Pakistani nuclear cooperation was coherent with general Beg’s strategic choices. Beg initially approved Pakistan’s participation in the coalition against Iraq; but by the end of 1990 he changed his mind and made it public in late January 1991.\textsuperscript{38} He actively sought a partnership with Iran to protect against the US.\textsuperscript{39} He wanted to establish a close partnership with Iran in order to protect both countries against the United States. (He ended up grudgingly accepting Pakistani participation in the coalition

\item Kux, op. cit., p. 299.
\item Hassan Abbas, Pakistan’s Drift into Extremism. Allah, the Army, and America’s War on Terror, New Delhi: Pentagon Press, 2005, p. 142. Mrs. Bhutto claims to have ordered, during her first mandate, that no Pakistani nuclear scientist leaves the territory without her written permission (quoted in Rohde, « Nuclear Inquiry… » , op. cit.).
\item Kux, op. cit., p. 313.
\item See John Lancaster & Kamran Khan, « Pakistanis Say Nuclear Scientists Aided Iran », \textit{Washington Post}, 24 January 2004. Beg’s concept was called “strategic defiance”. The more precise expression « strategic depth » is attributable to general Hamid Gul, then-chief of ISI.
\end{enumerate}
\end{footnotesize}
as long as it was limited to the defense of Saudi Arabia.) Political reasons were not the only ones at play: general Beg thought it was a good way to finance the defense budget, especially in the light of coming US sanctions. Several former officials of Nawaz Sharif’s first government (November 1990 – July 1993) have separately confirmed that in 1991, general Beg tried to convince Mr. Sharif to undertake a large-scale nuclear cooperation with Iran.40

There were indeed high-level contacts to that effect between the two governments during the year 1991. Envoys of Hashemi Rafsanjani (including Mohsen Rezai, head of the Pasdarsans from 1981 until 1987) visited Sharif in February and July 1991. Pakistani authorities have confirmed that Beg was involved in 1991 about transfers to Iran.41 In November 1991, general Asif Nawaz (who had succeeded Beg in August) went himself to Tehran; meanwhile, Beijing reportedly gave its blessing to Iran-Pakistan cooperation.42 General Beg himself has confirmed that contacts with Iran continued after Benazir Bhutto’s departure in August 1990.43

It is difficult to know with certainty what became of these projects. Some claim that Pakistan and Iran did agree on nuclear cooperation and discussed the possibility of mutual defense treaty.44 According to Beg, an agreement was indeed reached in 1991 for nuclear cooperation in return for conventional weapons and oil.45 However, according to US ambassador Robert Oakley, Nawaz Sharif and President Ghulam Ishaq Khan then told Rafsanjani that Pakistan would not implement the agreement.46

What is clear is that the bilateral cooperation that was envisioned by the two countries was a two-way street: it did not concern only nuclear technology, but also conventional arms, probably oil, as well as mutual political support.

40 See Lancaster & Khan, « Pakistanis Say Nuclear Scientists Aided Iran », op. cit.; and Gaurav Kampani, Proliferation Unbound: Nuclear Tales from Pakistan, Center for Nonproliferation Studies, Monterey Institute for International Affairs, February 2004. One of the former officials, Chaudhry Nisar Ali Khan, says that Beg declared to him at the time: “Iran is willing to give whatever it takes, $6 billion, $10 billion. We can sell the Bomb to Iran at any price » (Wilson, « Iran, Pakistan and Nukes », op. cit.; see also Gannon, « Explosive Secrets from Pakistan », op. cit.). Another one, Ishaq Dar, mentions 12 billion dollars (Shaukat Piracha, « Beg asked Nawaz to give nuclear technology to a ‘friend’, says Ishaq Dar », Daily Times, 21 September 2005). Still another one claims that Iran offered Beg “around 8 billion dollars” in 1991 (quoted in Powell & McGirk, op. cit.).
41 Lancaster & Khan, « Musharraf Named in Nuclear Probe », op. cit.
46 Lancaster & Khan, « Pakistanis Say Nuclear Scientists Aided Iran », op. cit.
In the nuclear realm, the known transfers of that period involved diagrams for P1 and P2 centrifuges, 500 used P1 centrifuges in a disassembled form – all delivered in the years 1994-1995; as well as a document describing, *inter alia*, “the casting of enriched and depleted uranium metal into hemispheres, related to the fabrication of nuclear weapons components”. Some shipments reportedly took place after 1995, perhaps as late as 2000.

This second influx of Pakistani technology to Iran took place during Mrs. Bhutto’s second mandate (October 1993 – November 1996). Given the extent of government-to-government contacts, it certainly took place with the knowledge of several key authorities.

The full scope of Pakistani exports and transfers to Iran – be they envisioned, planned or realized – is probably not yet known. According to a reported IAEA account, contacts continued after 1996, since no less than 13 meetings took place between Tehran and representative of the network in the years 1994-1999. Several questions still need to be addressed. Did the infamous “Chinese blueprint” for a nuclear weapon ever find its way into Iran? How many P1 spare parts and P2 parts (ring magnets in particular) were actually delivered to Iran by the Khan network? Given the similarities between the Pakistani Khushab reactor and the planned Iranian Arak reactor, was there any Pakistani help involved?

**- Iraq**

Available sources indicate that the initial contact with Iraq was made just a few weeks after the invasion of Kuwait. A note from the Iraqi intelligence services, dated October 6, reports that AQ Khan was ready to help Baghdad to “establish a project to enrich uranium and manufacture a nuclear weapon”. It reported that AQ Khan was prepared to give Iraq “project designs for a nuclear bomb”. Equipments were to be transferred from European companies to Iraq via a Dubai-based company. The Iraqi government, however, feared that it was a sting operation.52

Such a gesture would have been consisted with general MA Beg’s opposition to Pakistani participation in the international coalition (an opposition he began to express at the end of 1990). At the same time, however, if Beg was keen to help Iran, it would have been

50 According to the IAEA, Iran had inquired into the delivery of 900 ring magnets suitable for P2 machines from a foreign entity in mid-2003. (IAEA, Implementation of the NPT Safeguards Agreement in the Islamic Republic of Iran, GOV/2006/15, 27 February 2006, p. 4.)
51 “Memo # 78m, Subject: Proposal”, Iraqi intelligence document, 6 October 1990.
illogical for him to support the development of an Iraqi bomb at the same time. Helping Saddam Hussein, Iran’s mortal enemy, to get nuclear weapons might have been consistent with Beg’s political preferences (a staunch opponent of US influence in the region), but completely at odds with his personal culture (a Shi’a with strong admiration for Iran).

- North Korea

The Pakistan-North Korea strategic connection was established as early as in 1971, when ZA Bhutto made Pyongyang a major source of conventional arms procurement. The Iraq-Iran war cemented the partnership between the two countries, who both aided Tehran’s missile program. According to Indian sources, Pakistan and North Korea began their missile and nuclear cooperation in 1988. Most sources agree, however, that the nuclear side of the bilateral cooperation began only around 1993. One of them claims that the barter arrangements dates precisely to December 1994, when Benazir Bhutto arranged it in Pyongyang at the request of Abdul Waheed Kakar, the Army CoAS. AQ Khan reportedly admitted that he was given a tour of Pyongyang’s nuclear facilities in 1999. It is possible that the DPRK sometimes would serve as a conduit for Chinese assistance to Pakistan.

The missile imports were discovered by the United States around 1997-1998. In April 1998, the State Department applied sanctions against KRL. At about the same time, Washington also discovered that Islamabad exported nuclear technology to Pyongyang. It asked Nawaz Sharif to cease transfers; Sharif made a commitment to not transfer nuclear weapons to Pyongyang, but refused to go further. Known transfers lasted until around July 2002. According to Musharraf, “probably a dozen” centrifuges were sold. Most available sources refer to P-1 technology, but some have suggested they may have

58 The existence of nuclear exports to Pyongyang was reported in the 1998 Bermudez article (op. cit.).
included P-2 centrifuges. There are also allegations of a broader cooperation in the nuclear area.

Kakar’s successor, General Jehangir Karamat (CoAS from 1996 to 1998, and ambassador to the United States until 2006) may have played a significant role in the DPRK-Pakistan connection.

The most likely explanation of what happened with North Korea is that it was a “quid pro quo”. This is what the US government believed in the late 1990s. However, other hypotheses exist. Nuclear exports seem to have begun much later than missile imports. Some well-informed analysts have stated that the latter were financed by “money and rice”. The Pakistani “reserve crunch” might have prompted Pakistan to turn from cash to nuclear technology in return for missile technology. Whatever the reality, the most detailed studies about the DPRK-Pakistan ballistic and nuclear relationship have refrained from drawing definitive conclusions about its nature, especially given the uncertainties about the exact scope of the nuclear relationship.

- Libya

The nuclear relationship with Libya began in the mid-1970s. It is likely that Tripoli financed Pakistan’s nuclear program up to several hundreds millions of dollars. However, initial transfers to Libya were limited to knowledge and expertise through training. This first phase ended with the deposition of ZA Bhutto. Concrete transfers took place only after the reinvigoration of Libya’s program in 1995. Contact was made with AQ Khan at that time.

In 1997, Libya received 20 complete L1 centrifuges and most of the components for another 200. In 2000, it received two complete but “second-hand” L2 centrifuges, as well as one cylinder containing 1.7 ton of UF6. In late 2001 or early 2002, documentation on

64 See Talbott, op. cit., p. 150.
nuclear weapon design, including the “Chinese blueprint”, was transferred. In late 2002, components for a large number of L2 began to arrive.69

The transfers made to Libya raise two questions. First: why Libya? The reasons remain unclear. Personal greed and a temptation to give the Bomb to a Muslim country that had helped so much Pakistan in the past seem to have been determining factors. (Ghaddafi was a major backer of the Pakistani effort, and may have asked for payback.) However, if this is correct, a second question must be answered: how come that extensive transfer of nuclear technology to another country could have taken place from 2000 to 2003, at the exact time of Pakistan’s consolidation of nuclear policy-making? It seems that AQ Khan was allowed to continue his travels even after March 2001.70 The reason may be that he had the keys to the imports network, still vital for the Pakistani nuclear program.71 Note that AQ Khan remained « Special Adviser to the Chief Executive on Strategic and KRL Affairs » after his dismissal.

- **Saudi Arabia**

There is no hard evidence of Pakistani-Saudi cooperation on nuclear issues in the public domain. The hypothesis of such cooperation rests on a combination of ample anecdotal evidence and strong political logic.

Saudi financial support for Pakistan’s nuclear program in the 1970s is well documented (see above). US, Israeli but also Saudi sources (Mohammad al-Khilawi, a diplomat who defected to the United States in 1994) have reported in the early 1980s Saudi financial support for the Pakistani program was continuing.72 The BCCI may have been one of the conduits used.73 This would make the banks a key institution, both involved in imports and exports. Khalid Hassan, a former adviser to Ali Bhutto, confirmed that Saudi Arabia was indeed an essential foreign fund-giver to the Pakistani program. Nawaz Sharif called Prince Abdallah for his opinion before giving the go-ahead to the 1998 tests.74

---

71 Personal communication by a US expert, drawing on conversations with former SPD officials.
In 1990, Saudi Arabia was reportedly tempted to get Pakistani nuclear weapons for its CSS-2 missiles.\(^{75}\) Islamabad is said to have refused because of the political risks involved.\(^{76}\) In May 1999, Prince Sultan (then defence minister) was the first-ever foreign leader to visit Kahuta. AQ Khan, for his part, visited Saudi Arabia at least twice (November 1999, September 2000).\(^{77}\) Saudi leaders have attended Pakistani Ghauri test launches (2002 and 2004).

The nuclear question seems to have been raised anew after 2001, including in discussions with Islamabad.\(^{78}\) Prince Sultan was reportedly given a tour of Pakistani nuclear installations in August 2002.\(^{79}\) According to US ambassador Chas Freeman, in 2003 king Fahd asked for a nuclear guarantee in case Iran produced the Bomb.\(^{80}\) Whatever was said by Washington, it is dubious that in the post-9/11 context Riyadh believes it will always be protected by the United States. (The 2003 US military withdrawal from Saudi Arabia may have been another incentive.) According to the Guardian, three options for the Saudi nuclear future were considered that year by Riyadh: a nuclear deterrent; a security guarantee; or a nuclear-weapon free zone in the region.\(^{81}\) (Prince Turki implicitly confirmed the existence of the document by stating it was not followed by action.\(^{82}\)) A visit by Prince Abdallah in October 2003 was reportedly the next occasion for Islamabad and Riyadh to discuss nuclear cooperation. One source asserts that a “nukes for oil” barter was agreed upon.\(^{83}\) An Israeli government official reportedly stated that Riyadh formally asked for nuclear warheads to equip its CSS-2.\(^{84}\) Other sources say that several Saudi C-130 made return trips to Pakistan between October 2003 and October 2004,

---

\(^{75}\) President H. G. W. Bush was reportedly told about this by US intelligence in late November 1990. Bergman, op. cit..

\(^{76}\) Mansoor Ijaz, « Pakistan’s Nuclear Metastasis : How Widespread is the Cancer ? », The Weekly Standard, 8 January 2004. According to the author, another option was to set up a secret nuclear base on the territory of another Gulf monarchy.

\(^{77}\) After the November 1999 visit, a Saudi nuclear expert reportedly declared : « Saudi Arabia must make plans aimed at making a quick response to face the possibilities of nuclear warfare agents being used against the Saudi population, cities or armed forces » (Gopalaswami Parthasarathy, « Pakistan Plays Nuclear Foosie ; Does Anyone Care ? », Wall Street Journal, 2 janvier 2004).

\(^{80}\) Harrison, op. cit.

\(^{82}\) Khalaf et al., op. cit.

followed by visits of nuclear experts in 2004-2005 under cover of the Hajj.\(^8\) (The same sources say that Riyadh’s decision to recall 80 diplomats in January 2004, and general Musharraf’s unexpected trip to Saudi Arabia in late June 2005, were caused by the windfall of the Abdul Qadeer Khan affair.\(^8\)) In April 2006, a French media outlet stated that prince Khaled, vice-minister for defense, visited KRL in October 2004. It affirmed that nuclear cooperation between the two countries was now well underway. It stated that an agreement on nuclear cooperation was made at the occasion of king Abdallah’s visit to Islamabad in February 2006, followed a visit to KRL by Prince Sultan bin Abdulaziz, defense minister, in April.\(^8\) A few weeks later, a German report stated that the Al-Sulayyil base, where CSS-2 is believed to be hosted, now houses Pakistani Ghauri missiles.\(^8\)

Most of these elements are unconfirmed reports, but they are extraordinarily persistent. The doubts about Riyadh’s intentions have been further raised by the country’s decision in April 2005 to ask the IAEA for a “Small Quantities Protocol” (SQP), exempting the Kingdom from intrusive monitoring of nuclear activities.

--- Other countries?

It was reported in 1999 by a Pakistani newspaper that the United Arab Emirates had requested nuclear assistance to AQ Khan during a visit of minister of information Shaykh Abdullah Bin Zayid Al Nahyyan; AQ Khan reportedly said that he would not give nuclear weapons to the UAE “on a platter”, but would consider nuclear training and education.\(^8\) There are good reasons to believe that the UAE could have expressed an interest in nuclear weapons: (1) its central role in the foundation of the BCCI, which was probably used as a conduit for Pakistani imports and exports; (2) its pivotal role as a “node” in Khan’s exports network; (3) its unease about the development of Iran’s nuclear program; (4) its possession of Black Shaheen cruise missiles (as well as a few ageing Scud B ballistic missiles), which could probably host a small-size nuclear warhead.

It was reported in 2004 that an offer for nuclear technology and hardware was made by AQ Khan to Syria.\(^9\) AQ Khan gave several lectures in Damascus in late 1997 and early

\(^8\) Mir, op. cit.

\(^8\) “Face au défi iranien, une bombe saoudienne?”, Intelligence online, 21 April 2006.

But he is also suspected to have met a top Syrian official in Beirut to offer assistance with a centrifuge enrichment facility. After 2001, AQ Khan’s meetings with Syrians were reportedly held in Iran. Not much is known about the Syria case. Some intelligence sources reportedly believe that the country has imported centrifuges from the network. However, other sources have stated that the offer was declined.

Other countries have been mentioned. It was reported in 2004 that AQ Khan also offered nuclear assistance to Egypt, who is said to have turned down the offer. Some suspect that AQ Khan may also have transferred centrifugation technology to Brazil. Finally, some sources claim that Pakistan may have exported its URENCO centrifugation technology to China.

Pakistani Nuclear Exports: Was There a State Policy?

- *An individual initiative?*

Most knowledgeable observers of the Pakistani scene agree that AQ Khan had an important degree of autonomy. If nuclear weapons exports had been a consistent State policy, then it would have been logical that PAEC had a role in it too, which does not seem to have been the case. This does not exonerate Pakistani authorities (see below): but, as an informed observer put it, “Khan likely exceeded whatever mandate he received from the Pakistani leadership”. It seems that AQ Khan was able to manipulate the government and the Pakistani authorities did not want to know what was going on. For instance, he would tell the Prime Minister that he needed to Iran for reasons of national security, and that would be enough. “As long as Khan’s group delivered the goods, no state authority questioned his tactics”. Khan’s personal profits were reportedly known by the ISI since 1988, but Pakistan’s military authorities refused to act.

However, at some point, it became not good enough. Three events changed the picture: the 1998 tests, the 1999 coup, the 2001 attacks and their aftermath. There was a progressive reorganization of Pakistan’s nuclear program between 1998 and 2001. The nuclear laboratories, which for a long time had a large operational and financial autonomy, were reined in. AQ Khan was forced to retire from KRL in March 2001.

Several explanations exist as per the reasons of this decision. Some US Administration officials have said that this was an American request. It may also have been Musharraf’s own initiative – or a combination of both. After the 1998 tests, Pakistan was under strong pressure from the United States to show responsible behaviour, and in dire need of Western assistance. An inquiry by the newly-created National Accountancy Bureau had revealed unapproved financial transactions; it was not pursued due to the sensitivity of the matter.

According to several sources, the ISI followed AQ Khan to Dubai in the fall of 2000. When asked for an explanation by general Musharraf, who was concerned about financial improprieties, he complained about the surveillance, gave false excuses and continued his travels. The same thing happened when he was asked by Musharraf to explain an aircraft landing in Zahedan, Iran. AQ Khan was clearly reluctant to abide by the new rules, which included a better oversight of nuclear officials. He was making it known that he disapproved the reorganization of Pakistani nuclear policy.

The official version, which includes in particular the report that Pakistani authorities only discovered AQ Khan’s unsanctioned activities after the ISI raided a cargo plane leaving for North Korea in 2000, is not convincing. But there was definitely a personal element in his activities.

Khan’s motivations were complex and evolved over time. They cannot be reduced to a single factor. According to David Sanger, “to understand AQ Khan, you have to understand ego, greed, nationalism, and Islamic identity”. A first motivation was to ensure his personal role and legitimacy in Pakistan’s nuclear program: transfers were the counterpart of imports made for the sake of the Pakistani program, or of financial assistance given to Pakistan by countries such as Libya or Saudi Arabia. AQ Khan also reportedly said in his debriefing sessions that he thought that “the emergence of more
nuclear states would ease Western attention on Pakistan”. A second motivation, which seems to have gained in importance over time, was pure and simple greed. A third element was some kind of Islamic *hubris*, a willingness to be recognized as the one who gave the Bomb to the *Umma*; he reportedly said that his transfers “would help the Muslim cause”. (Some sources have reported that he participated in Lashkar-e-Toiba meetings.) That said, some of those who know him say AQ Khan is not an Islamist, and that he emphasized his faith to bolster his support in the country.

**- A State policy?**

Most known exports happened between 1988 (the death of Zia) and 1999 (the Musharraf takeover). In August 1988, the program came into the hands of Senate chairman GI Khan (who immediately became President according to succession rules) and Army CoAS Mirza Aslam Beg.

In the ensuing decade, the structure of Pakistani power was complex, and divided amongst three individuals: the President, the Prime Minister, and the Army CoAS. (See chart.) For this reason, it is obviously difficult to answer to the question “who knew what?”. As two knowledgeable observers put it, “The diffusion of authority enabled national security organizations to manipulate the system and become nearly autonomous. In this environment, Khan would have needed to convince only one of the centers of power that sharing nuclear technology with foreign entities would be in Pakistan’s interest”.

What seems clear is twofold. First, the Prime Ministers during that period (Benazir Bhutto and Nawaz Sharif in particular) were not completely out of the loop. Indeed, the Pakistani government openly acknowledges the role of two (conveniently dead) individuals close to the Bhutto family: general Imtiaz Ali, military secretary to ZA Bhutto and defense adviser to his daughter Benazir, and family dentist (*sic*) Zafar Niazi. Second, a handful of Pakistani leaders seem to have played a key role:

- One was general Mirza Aslam Beg, vice-CoAS then CoAS from August 1988 until August 1991. There is ample evidence of his involvement in Iranian-Pakistani nuclear cooperation. As stated above, his personal background (a Shi’a) and political preferences led him to take a consistent pro-Iranian, anti-American stance.
- Another key individual may have been Ghulam Ishaq Khan. One quasi-official statement reported GI Khan as being actually *in charge* of the nuclear program from

---

110 Rohde & Sanger, “Key Pakistani Is Said…”, op. cit.
111 Ibid.
113 Lavoy & Hassan Khan, op. cit.
1975 until 1991. As defense minister, he was involved in the decision to make Kahuta a separate entity under AQ Khan. He was a member of the three-men KRL coordination board when it was created in 1976. As finance minister, he was present at the first 1983 cold tests. He also gave tax-free status to the BCCI, which was used as a conduit for Pakistani nuclear imports and exports. Being chairman of the Senate, he automatically became president, at the same time as MA Beg became CoAS, after Zia’s death, and remained in that position until July 1993. He was close to Beg and broke with him only when he became clear that he wanted to topple Nawaz Sharif. (GI Khan also opposed Beg’s preferred candidate for his own succession, general Hamid Gul, a former ISI chief.) In 1990, AQ Khan acknowledged that he had been a key supporter of the nuclear program. When he died, AQ Khan had a mausoleum built for him in the “GI Khan Institute”, for which he had been the project director.

Finally, it is hardly conceivable that successors to MA Beg as chiefs of Army staff (generals Azif Nawaz, Abdul Wahid Kakar, Jehangir Karamat, and Pervez Musharraf) were completely unaware of any transfers of nuclear technology. At the very least, they proved unwilling to ensure that Khan was not able to proceed with unsanctioned exports. General Jehangir Karamat in particular may have been a key player in his capacity of CoAS from December 1996 until his resignation in October 1998. He was in good terms with AQ Khan. He reportedly ensured KRL participation in the 1998 tests. (He was nominated ambassador to the United States in November 2004: but in March 2006, the Pakistani press has announced his early departure from his position, for unknown reasons.) AQ Khan has reportedly admitted that both Kakar and Karamat knew and approved of his dealings with North Korea.

During the period 1987-1999, AQ Khan, who was certainly good at manipulating the system, may have been himself manipulated as to ensure “plausible deniability”.

116 Chaudhri, “Pakistan’s Nuclear History…”, op. cit.
119 Clary, The A. Q Khan Network…, op. cit., p. 44.
So, were nuclear exports a personal initiative or a State policy? The answer is: a little bit of both, in various proportions according to the circumstances. Different transfers probably reflected different situations:

- The apparent *quid pro quo* with **North Korea** (nuclear for ballistic technologies) was probably a State policy made with knowledge of most high-level Pakistani authorities, including Benazir Bhutto and Nawaz Sharif. Of course, no element of Islamic solidarity was present there. Rather, it was the need to ensure the continued development and reliability of the liquid-fuel (*Ghauri*-type) family of Pakistani ballistic missiles.

- Any nuclear cooperation discussions with **Saudi Arabia** would have been, in all likelihood, sanctioned by the highest political and military authorities.

- The case of **Libya** may have been a Khan initiative. However, this may also have been “payback time”. When Tripoli agreed to give financial support for the Pakistani program in the early 1970s, it asked for nuclear technology in return. ZA Bhutto never committed himself to go that far.123 But he may have created expectations in Ghaddafi’s mind.

- Offers to **Iraq** and possibly to **Syria** were probably AQ Khan’s own initiative.

- **Iran** is the most complex case. The launching of a military-oriented nuclear cooperation was probably not sanctioned by President Zia ul-Haq. However, in the period 1988-1995, exports to Iran were known by most Pakistani leaders, including Prime Ministers Bhutto and Sharif, and deliberately encouraged by some, such as MA Beg and GI Khan.

- Finally, the possible *quid pro quo* with **China** (centrifugation technology in return for UF6 or HEU, as well as a weapon design) would have been a State policy. Some claim that such a deal was concluded in the mid-1980s. In any case, the scope of Pakistan’s nuclear cooperation with China, which extends for more than a decade, strongly suggests a government approval.

It seems reasonable to say that there was no constant and consistent State policy governing the nuclear exports made, or sanctioned, by Pakistani officials in the past 30 years. Concrete interests, personal and national, seem to have been the primary driver behind these exports. They were made possible by the large freedom of manoeuvre given to AQ Khan’s activities until the end of the 1990s. But there has been, at least in one instance, in the late 1980s, an attempt to make nuclear exports part of a broader national strategic orientation.

Some argue, however, that Pakistani nuclear exports do reflected a consistent State policy. According to Simon Henderson, there were two successive Pakistani strategies. First, a strategy of exchanges or barters: one with China (centrifuge technology for HEU and bomb design), one with North Korea (centrifuge technology for ballistic missiles).

Second, a strategy designed to blackmail the United States, through exports to Muslim States.\textsuperscript{124}

Alternatively, different actors of the Pakistani leadership may have had different strategies.

**Current and Future Exports**

There is no reason to believe that the current Pakistani leadership would today deliberately transfer expertise and knowledge to other States or non-State actors, at least in peacetime. The risk of further deliberate transfers of nuclear technologies by the Pakistani authorities appear much weaker today – at least as long as there is an objective alliance between Pakistan and the United States: Islamabad knows a red line when it sees one. And there are good reasons to believe that Pakistan has put its nuclear house in order, in a series of decisions and reorganizations made between 1998 and 2003. The SPD is a serious organization manned by serious people.

- **The risk of further unsanctioned transfers**

However, risks have not disappeared.

It is not certain that the additional security procedures set up by Pakistan since 2001 make it impossible to have significant unsanctioned transfers of know-how and expertise by lower-level scientists or engineers. No less than 10,000 to 16,000 people are employed by PAEC.\textsuperscript{125} Precedents are not reassuring. The full story of the travels of Sultan Bashiruddin Mahmood (a former PAEC director), Chaudry Abdul Majid (a former New Labs director), and Mirza Yusuf Baig (a PAEC engineer) to Afghanistan has yet to be written. The same for Suleiman Asad and Muhamed Ali Mukhtar’s alleged links with Al-Qaida.\textsuperscript{126} Some of these individuals were previously associated with AQ Khan, including Mahmood who had been his first boss in 1975. The old question “who will guard the guardians?” remains relevant in Pakistan.\textsuperscript{127}

In the past, key government officials were known for their Islamist sympathies. This was apparently the case for key scientists such as Abdul Qadeer Khan and Bashiruddin Mahmood, or military leaders such as Mirza Aslam Beg and Hamid Gul (a former ISI

\textsuperscript{124} NPEC Seminar, Washington, April 2006.

\textsuperscript{125} Estimates based on Chaudhri, “Pakistan’s Nuclear History…”, op. cit.

\textsuperscript{126} Mahmood and Majid were arrested on October 23, 2001 (« Two retired Nuclear Scientists admit to meeting Osama bin Laden », Dawn, 12 November 2001). Mahood had been fired from PAEC in 1998, perhaps due to a very peculiar conception of “Islamic science”. See Rory McCarthy, « Worrying times ? », The Guardian, 8 novembre 2001 ; and T. Sreedhar, « New threat from the Taliban », The Hindu, 18 mai 2001. Suleiman Asad and Muhamed Ali Mukhtar were sent to Burma at the end of 2001, officially to help building a nuclear reactor.

\textsuperscript{127} The ISI has no role in nuclear security (see David Rohde, « Nuclear Inquiry… », op. cit.). But it may have a role in the monitoring of SPD security personnel.
director).\footnote{128} This was also the case of Muhammad Aziz Khan (a former chairman of the joint chief of staff and as such responsible for nuclear procurement until 2004, and known to consider the United States as the enemy number one of the Muslim world). Some scientists and engineers may have divided loyalties if approached by a non-State Islamist actor. For a long time, this was not viewed as a problem by those overseeing the program: it was thought that piety was conducive to respect for authority.\footnote{129}

Risks of transfers would also exist in a crisis situation: Pakistan could pre-delegate launch authority by fear of pre-emption or decapitation.\footnote{130} Putting nuclear weapons systems on alert involves the relocation of several elements (physics packages, assembled warheads, delivery systems), making them vulnerable during transit. Also, it should be noted that a pilot flying a nuclear-armed aircraft is reportedly given all necessary codes before taking off.\footnote{131} One former official has even mused with the idea of a deliberate transfer to a non-State actor in wartime in order to ensure a capability to retaliate on Indian soil; such a scenario would fall into the category of sanctioned transfers.\footnote{132}

The lack of real checks and balances and democratic controls in today’s Pakistan might make it still possible in a post-Musharraf future for a Pakistani CoAS to order, on his own, a direct transfer of key technologies or equipments.

- The risk of further sanctioned transfers

If Iran encountered technical problems in the advancement of its nuclear program, it surely would like to benefit again from Pakistan’s expertise. But it is very unlikely that Islamabad would agree. At the same time, two critical Iranian players of the Pakistan-Iran discussions of the 1980s are still in power in Tehran: Rafsanjani (head of the Expediency Council) and Mohsen Rezai (secretary of the Expediency Council, and a former candidate to the 2005 elections whose views on the United States are close to Ahmadinejad’s). Their knowledge about the Pakistani system may put them in a position to approach certain players. In any case, new State-sponsored transfers would certainly suppose a breakdown in US-Pakistan relations. Note also that Islamabad would have to make a choice between Riyadh and Tehran.

As far as Saudi Arabia is concerned, three scenarios can be conceived. A first scenario is a Pakistani nuclear guarantee without deployments, such as the one given by the US to

\footnote{128} Some sources have reported that AQ Khan, Bashiruddin Mahmood and Hamid Gul participated in Lashkar-e-Toiba meetings. Kaushik Kapisthalam, « Pakistan’s forgotten al-Qaeda nuclear link », Asia Times, 4 juin 2004; B. Raman, « The Omens from the White House », South Asia Analysis Group Papers, n° 381, 23 décembre 2001.

\footnote{130} Peter R. Lavoy & MAJ Stephen A. Smith, « The Risk of Inadvertent Nuclear Use Between India and Pakistan », Strategic Insight, 3 février 2003.

\footnote{131} This procedure was confirmed by general Durrani’s report (op. cit., p. 33). However, according to one account, the pilot would reportedly receive the codes only once he has left the country’s airspace (Bennett Jones, op. cit., p. 212.)

\footnote{132} Personal communication by a former ISI director, october 2004.
Japan. Ballistic missiles based in south-western Pakistan would have the range to cover a significant portion of Saudi neighbourhood, including US bases (though not Israel). Some Pakistani planners acknowledge that such an option would be conceivable. It would not question the existence of US-Saudi and US-Pakistan alliances.

A second scenario would be a security guarantee involving nuclear deployments on Saudi soil, such as the one given by the US to Germany. It would not be a violation of the NPT, and if Pakistan continues to build up its arsenal, would not detract from immediate deterrence needs vis-à-vis India. It would be a win-win proposal, since Pakistan would gain in survivability against a hypothetical Indian preemptive strike (although even Shaheen-2 missiles would not be able to threaten Delhi from Saudi territory). Being detectable, such deployments would only be conceivable if relations between Washington on the one hand, Riyadh and Islamabad on the other. However, Pakistani planners acknowledge that they would be unacceptable to Israel. One of them calls the scenario “worse than the Cuban [missile] crisis”.

A third scenario would be a Saudi bomb, either with the help of Pakistan or completely indigenous. Though highly unlikely, it is not completely farfetched given the Kingdom’s wealth. A « Nuclear Energy Research Institute » was inaugurated in 1988, and Saudi publications show an interest in nuclear physics and technology. The Saudi request for access to the SQP in 2005 (immediately followed by an unexpected visit by Musharraf on 25 and 26 June) raised eyebrows. Some sources assert that a second nuclear research center was created in 1975 at the Al-Suyyalil base. This is where the CSS-2 missiles were stored in 1998 – the same year as the creation of the Nuclear Energy Research Institute. Washington reportedly told Islamabad that the sale of Pakistani nuclear weapons to Saudi Arabia is a red line Pakistan should not cross.

* 

Since 1999, Pakistan has made considerable efforts in order to put its nuclear house in order, and a sense of responsibility on nuclear matters seems to pervade the country’s leadership today. However, it will take time before Pakistan can be considered as “just another nuclear country”. Two conditions may have to be met: the establishment of a

---

133 A Ghauri-2 missile based in Baluchistan could cover a significant part of the Middle East. Shaheen-2 missiles would also be conceivable, but they are the “crown jewels” of the Pakistani deterrent.
134 Interview with a senior Pakistani planner, Rawalpindi, October 2005.
135 According to Saudi defector Mohammad Al-Khilawi, such a guarantee was a condition given by Riyadh to its financing of the Pakistani program. Colvin & Sawyer, op. cit.
